Introduction to Waves and Electromagnetic Spectrum

What Are Waves?

Waves are disturbances that transfer energy from one point to another without the physical transfer of matter. They are ubiquitous in nature and manifest in various forms, including sound waves, water waves, and electromagnetic waves.

Types of Waves

Waves are primarily classified into two categories:

1. **Mechanical Waves:** Require a medium (like air, water, or solids) to travel through. Examples include sound waves and water waves.
2. **Electromagnetic Waves:** Do not need a medium to propagate and can travel through the vacuum of space. Examples include light, radio waves, and X-rays.

The Electromagnetic Spectrum

The electromagnetic spectrum encompasses all types of electromagnetic radiation, ordered by their wavelength and frequency. It ranges from very long radio waves to extremely short gamma rays.
