Understanding Ship Pre-Cargo Matrix for White Oil Petroleum Products

Introduction to White Oil Petroleum Products

White oil, also known as paraffinic or mineral oil, is a highly refined, colorless, odorless, and tasteless petroleum product. It is extensively used across various industries, including cosmetics, pharmaceuticals, food processing, and packaging, owing to its purity and inert properties. Due to its widespread application, the transportation of white oil requires meticulous planning and adherence to safety and environmental standards. The ship pre-cargo matrix plays a vital role in ensuring the safe and efficient handling of white oil during maritime transit.

What is a Ship Pre-Cargo Matrix?

A ship pre-cargo matrix is a comprehensive plan or checklist that outlines all necessary procedures, safety measures, and logistical considerations before loading cargo onto a vessel. For white oil petroleum products, this matrix ensures compliance with regulatory standards, maintains product

integrity, and guarantees the safety of both the crew and the environment. It typically includes details such as cargo specifications, tank preparations, safety protocols, documentation, and contingency plans. Proper implementation of the pre-cargo matrix minimizes risks associated with contamination, spills, and accidents during loading, transit, and unloading.

Components of a Ship Pre-Cargo Matrix for White Oil

1. Cargo Specification and Quality Control

Before loading, it is crucial to verify that the white oil meets the stipulated specifications, including:

1. Viscosity
2. Density
3. Purity and contamination levels
4. Color and odor
5. Flash point

Quality control measures include sampling, laboratory testing, and certification to ensure compliance with contractual and safety standards.

2. Tank Preparation and Cleaning

Proper tank preparation is fundamental to prevent contamination and ensure the integrity of white oil during transit.

1. Cleaning of cargo tanks to remove residual residues from previous cargos, especially if switching from incompatible products.
2. Inspection of tank coatings to verify they are suitable for storing white oil, which is inert but sensitive to contamination.
3. Checking for corrosion or damages in tanks and rectifying issues prior to

loading.
