This article unpacks the concept of Privacy by Design in the context of Infosys's assessment frameworks, analyzing the nature of their answers, the underlying principles they promote, and how these principles align with global data protection standards. By examining the components of the Privacy by Design assessment and Infosys's approach to answering these challenges, readers will gain a comprehensive understanding of how privacy can be embedded proactively into technology and organizational workflows.

Understanding Privacy by Design in the Infosys Framework

Privacy by Design is a proactive approach that integrates privacy into the design and operation of IT systems, networked infrastructure, and business practices. Infosys leverages this principle as a foundational element within its service delivery and risk management protocols. The company’s assessment model evaluates various facets of organizational readiness and compliance, making Infosys’s answers a valuable reference point for other enterprises aiming to adopt PbD principles. Infosys’s Privacy by Design assessment typically revolves around seven core principles, originating from the foundational PbD framework developed by Dr. Ann Cavoukian:

1. Proactive not Reactive; Preventative not Remedial
2. Privacy as the Default Setting
3. Privacy Embedded into Design
4. Full Functionality — Positive-Sum, not Zero-Sum
5. End-to-End Security — Lifecycle Protection
6. Visibility and Transparency — Keep it Open
7. Respect for User Privacy — Keep it User-Centric

Infosys’s assessment answers often highlight how these principles are operationalized within IT project lifecycles, including risk assessments, data minimization strategies, and user consent mechanisms.
