Step-by-Step Guide: Solving a Typical Graph Theory Problem Using Deo’s Methodology

Let's illustrate Deo’s approach with a common problem: Prove that in any connected graph with n vertices and more than $\frac{n(n-1)}{2}$ edges, the graph must contain a cycle.

Step 1: Restate the Problem

Given: A connected graph with n vertices.

Question: Does having more than $\frac{n(n-1)}{2}$ edges imply the presence of a cycle?

Step 2: Understand the Known Results

The maximum number of edges in a simple undirected graph with n vertices (a complete graph K_n) is $\frac{n(n-1)}{2}$.

A tree on n vertices has exactly $n-1$ edges and contains no cycles.

Step 3: Analyze and Construct an Argument

Since the maximum number of edges in a complete graph is $\frac{n(n-1)}{2}$, and a tree has fewer, any graph with more than $n-1$ edges but fewer than $\frac{n(n-1)}{2}$ edges is potentially cyclic.

Step 4: Formal Proof

Claim: Any connected graph with more than $n-1$ edges contains at least one cycle.

Proof:

Assume the graph has n vertices and $e > n-1$ edges.

A tree on n vertices has exactly $n-1$ edges.

Since the given graph has more edges, it must contain at least one cycle (by the contradiction method or using the fact that adding an edge to a tree introduces a cycle).

Step 5: Conclude and Generalize

The argument demonstrates that exceeding $n-1$ edges in a connected graph guarantees the existence of at least one cycle, aligning with Deo's emphasis on combining known theorems with logical reasoning.
